BABY SALMON LIVE HERE
BY PROTECTING THE WATERWAYS ON YOUR LAND,
YOU CAN HELP SAFEGUARD
SALMON AND A HEALTHY, VIBRANT FUTURE FOR ALASKANS.
PROOF

Local scientists believe your land may be home to something called cold-water refugia which salmon need to survive. Cold water refugia are areas along a stream that stay cold in the summer and warm in the winter. These allow adult salmon to stay cool during the summer and baby salmon to stay warm during the winter.

Our goal is to provide you with information on what you can do, as a landowner, to protect land that is vital to salmon. If you would like more information about cold-water refugia on or nearby your property, please contact us. We look forward to building a partnership with you.

Sincerely,

Sue Mauger, sue@inletkeeper.org
